DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/11/2006 has been entered. Claims 1-9 and 12-25 are pending.

Drawings

2. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the drawings submitted on 07/08/2003 are informal. Applicant is advised to employ the services of a competent patent draftsperson outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeffrey R. Joseph on 01/19/2007.

The application has been amended as follows:

• In claim 12, line 8; --to-- has been inserted after "slider."

• In claim 13, line 3; "achieve said predetermined" has been replaced by --reduce --.

Reasons for Allowance

- 4. The following is an examiner's statement of reasons for allowance:
 - With regard to in dependent claims 1, 9, and 12, as the closest reference of record, Pendray et al (US 6,678,119) discloses a subambient pressure air bearing slider including: a slider body defined by a leading edge, an inner and outer edge and extending longitudinally along the slider body, and a trailing edge, the slider body including a leading air bearing surface; a leading portion extending from the leading edge of the slider, the leading portion having a first height lower than a height of the leading air bearing surface; a subambient pressure region extending between the leading portion and between the first and second low-profile members and, the low-profile members having a height that is less than the height of the leading air bearing surface; but fails to show that a width of a side air bearing surface in a latitudinal direction of the slider is selected to reduce the flying height's sensitivity to changes in camber/crowning.
 - Applicant asserts "The present invention provides a subambient pressure air bearing slider with a plurality of air bearing surfaces (ABSs) that provide an ultra-low and constant flying height even in varying temperature environments" (Specification, p. 9).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
